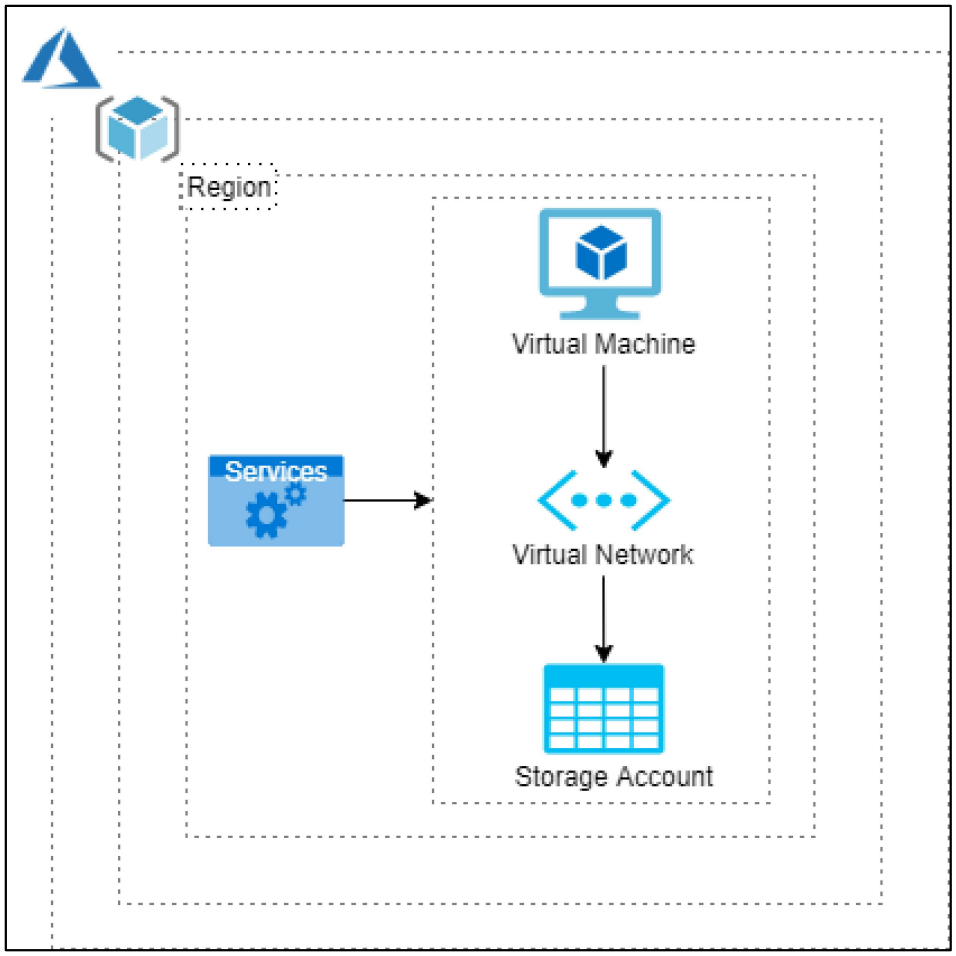
1. A Walk Through of Core Azure Services

1.1 Description

This lab allows you to explore the Azure portal and take a look at some of the entries in the Azure Active Directory. The Azure portal is the command center, information portal, and organizational hub for all Azure resources. You will spend the majority of your time creating and managing services here.

1.2 Architecture Diagram

The diagram below displays a visual representation of the Walk through of core Azure Services:



1.3 Lab Steps

Follow the steps outlined below to achieve the objective of this lab exercise:

1. Creating a Virtual Machine:
   Note: We can create or add a virtual machine.
   a. Type **virtual machines** in the search.
   b. Under **Services**, select **Virtual machines**.
   c. In the **Virtual machines** page, select **Add**.
   d. In the **Basics** tab, under **Project details**, make sure that the correct subscription is selected and then select the resource group created for you (<**Dept**><**empID**>**RG**).
   e. Under **Instance details**, type for the Virtual machine name and choose **East US** for your **Region**, and then choose **Windows Server 2019Datacenter** for the **Image**.
   f. Select the size as **standard B1s**.
   g. In **Inbound port rules**, choose **Allow selected ports** and then select **RDP**.
   h. Leave the rest of the settings to their default values and then select the **Review + create** button.

2. Creating a storage account:
   a. Search the storage account on search bar.
   b. On the **Storage Accounts** window that appears, choose **Add**.
   c. Select the subscription in which to create the Storage Account.
   d. Under the **Resource group** field, select **Create new**. Enter a name for your resource group.
   e. Enter a name for your storage account. The name you choose must be unique across the Azure. **Note**: Name must contain between 3 and 24 characters in length, and can include numbers and lowercase letters only.
   f. Select a Storage account location as **East US**.
   g. Select the **Review + Create** to review your storage account settings and create.
   h. Select **Create**.

3. Creating a Virtual Network:
   a. Search **Virtual Network** in search bar and create.
   b. Select the subscription in which to create the virtual network.
   c. Under the **Resource group** field. Enter a name for your resource group.
   d. Select a location for your virtual network or use the default location as **East US**.
   e. Click **Next: IP Addresses**, and for **IPv4 address space**.
   f. Select Subnet name and add subnet name and subnet range.
   g. Select **Review + Create**.
   h. Select **Create**.

1.4 Troubleshooting

S. No	Problem	Solution
1	Facing an issue while connecting to Virtual Machine to RDP	Use Microsoft Remote Desktop and Public IP to connect VM.
2	Validation error	Select the correct size.
