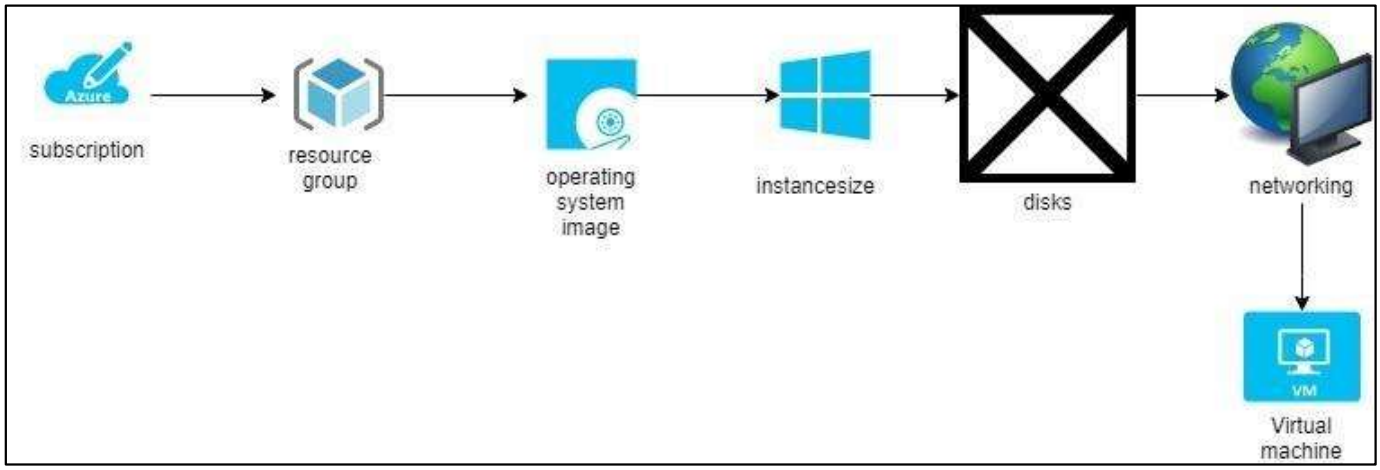
1. Creating a Windows Virtual Machine in Microsoft Azure

1.1 Description

Azure Virtual Machines are image service instances that provide on-demand and scalable computing resources with usage-based pricing. More broadly, a virtual machine behaves like a server: it is a computer within a computer that provides the user the same experience they would have on the host operating system itself.

1.2 Architecture Diagram

The diagram below displays a visual representation of the application architecture:



1.3 Lab Steps

Follow the steps outlined below to achieve the objective of this lab exercise:

1. Log in to the Azure Portal, select **Virtual machines** from the left pane.
2. Select the **Add** button. You can find a menu on the top right of the screen. In **Basics**, fill in the web form:
    a. Subscription: **Microsoft Azure Enterprise**
    b. Resource group: Use the one created for you
    c. Virtual machine name: <name of the virtual machine>
    d. Region: **East US**
    e. Availability options: **No infrastructure redundancy required**
    f. Image: **Windows Server 2019 Datacentre**
    g. Size: **Standard B1s**
    Note: This requires you to click **Change size**. In the resulting pop out window, highlight your choice and then click the **Select** button.
    h. Username: <uniqueName>
    i. Password: <Password123456#>
    j. Confirm Password: <Password123456#>
    k. Public inbound ports: **Allow selected ports**
    l. Select inbound ports: **RDP**
3. In **disks** make sure that the **Use managed disks** is set to **yes**.
4. Leave networking, management, Advanced and Tags to their default values and click on the **Review + create** button at the bottom of the screen.
5. Once you get a **Validation Passed** message, click **Create** at the bottom.
6. Click on the **virtual machine** name to go to it.

1.4 Troubleshooting

S. No	Problem	Solution
1	ERROR: **RDP connection Failure**	1. Reset Remote Desktop configuration. 2. Review VM console logs. 3. Reset your VM password. 4. Restart your VM. 5. Redeploy your VM.
2	Validation is failed	1. Check which part went wrong and can make it correct. 2. Instance size should be as per the allowed Policy.
